

ENCORE

ENCORE

The Encore table series was designed as a cost-effective Parson's table with nice aesthetic details. Starting with the ability to use any laminate for greater design flexibility, then having mitered corners to make an incredibly clean aesthetic with the laminate matching up at the corners. The Encore is a perfect table for conference, dining, meeting, café, and library applications.

CONSTRUCTION:

The inner skeleton of the Encore is comprised of ¾" multi-ply hardwood frames that extend from the bottom of one end panel, across the entire bottom of the table top, and to the bottom of the other end panel to give the table the strength and avoid the warping of the top. From that point an additional sheet of ¾" multi-ply hardwood is attached to the inside and outside of the end panels and the top, and those items are covered with the laminate of your choice. The underside of the table is a laminated removal panel that allows access to the inner skeleton to access electrical if required.

THICKNESS OF TOP AND END PANELS:

A standard Encore table has a 3" thick top and end panels, if adding electrical into the top, appropriate grommets will be cut into the tops for the electrical. If electrical is specified to go into the table, then the overall thickness of the top and end panels grow to 4 1/2" to allow space for the electrical unit.

SHIPPING:

Please note that the Encore table SHIPS COMPLETELY ASSEMBLED, so please ensure that the table will fit through doorways and into freight elevators prior to ordering.
